SAPUI5 for ABAPer's - Session 4 Assignment

- Add default view for invalid hashes with a back button
- The back button of detail view as well as of not found view shall use same code.
- Instead of navigating to detail view of Invoice add a new block beneath the list to show the detail of selected invoice item
- Revert back your app master detail navigation view. Configure your routes to call multiple views may be 2 or 3 views as many as you like with some text.

*** Try this ***

- For multiple views called via route try to see if you can handle data binding
