SAPUI5 for ABAPer's - Session 2 Assignment

- Lets add now livetext updated to each of the input fields Invoice type, Invoice Number and Company code on similar line we have done for Purchase Order
- Next is move all your hardcoded labels for input fields etc. into i18n concept.
- We want to do away with our dependency on Index.html lets bring Component.js. Adjust your application on similar lines we have done for Purchase Orders
- We want to bring a separate application descriptor lets bring it in via Manifest.json.
- Lets not clutter our App view, create a separate invoice view which will show the search fields as well as the invoice list table.

*** Try this ***

- See if you can filter the records based on entered fields.
- Try sorting the data on press of button
